A. C. HARRISON, Cert. S.I.B.

First Assistant Clerk: L. C. ROGERS, Cert. S.I.B.
Assistant Clerks: E. S. CHADWICK, H. S. WOODCOCK.

## Health Visitors :

```
*MISS D. POULSON *MISS M. E. HANDLEY
*MISS A. KNIGHT *MISS L. CUDLIPP
*MRS. M. SMEATON *MISS N. R. E. RUSH
                    * § MISS M. E. SVKES.
```

Port Sanitary Inspector: F. BATCHEL,OR. Disinfector: B. J. HILLS.

Public Vaccinators (part time)
C. J. MAYHEW, M.R.C.S. (Eng.) L.R.C.P. (Lond.) H. J. BELL, B.A., L.R.C.P., L.R.C.S. (Edin.)

Vaccination Officer :
H. W. JOHNSON.

Infant Life Protection Visitor :
*MRS. B. MADDEN.

## MUNICIPAL TUBERCULOSIS DISPENSARY.

## Medical Officer :

ROWAN W. REVELI, M.D., D.P.H., M.R.C.S., L.R.C.P. (LOND.)
Nurses:
$\begin{array}{ll}\text { MISS } & \text { L. LAMB } \\ \text { *MIISS } & \text { S. M. MITCHELL }\end{array}$

MISS V. F. WARDLAW *MISS H. M. NEVILL

Secretary
*MISS E. HEALEY
Almoner :
*MISS N. O. ALLEN

## CHILD WELFARE CENTRES AND MUNICIPAL MATERNITY HOSPITAL.

## Medical Officer

RUBY N. FOGGIE, м.в., Ch.в.
Matron :
*MISS C. A. ARKCOLL Almoner :
*MISS N. O. ALLEN
Lecturer to Pupils :
D. McASKIE, M.в., с.м. (Ed.)

## MILTON HOSPITAL FOR INFECTIOUS DISEASES.

Medical Officer :
$\dagger$ J. McGREGOR, L.R.C.P., L.R.C.S.
Matron :
MISS F. PETCHEY.

## LANGSTONE HOSPITAL.

## Medical Officer :

ROWAN W. REVELL, M.D., D.P.H., M.R.C.S., M.R.C.P., (L.OND.)
Matron :
MISS J. S. BROWN
PUBLIC ANALYST : R. P. PAGE, F.I.C. Assistant: C. M. BECKET'T

## SCHOOL MEDICAL SERVICE.

## Medical Adviser to the Education Committee

A. MEARNS FRASER, M.D. (Edin.) D.P.H. (Camb.)

## School Medical Officer :

T. ERNEST ROBERTS, M.B., B.S. (Lond.), M.R.C.s. (Eng.) D.p.f. (Camb.)

## Assistant School Medical Officers

LYS'TER COLE-BAKER, m.D., B.Ch., B.A.o. ELIZABETH M. MARTIN, m.b., B.Ch., d.p.н.
HI. GORDON McGREGOR, M.B., B.S., (Lond.) M.R.C.S., (Eng.) L.R.C.P. (Lond.)
Ophthalmic Surgeon (part time) :
W. S. INMAN, m.b., (Itond.)

Dental Surgeon :
P. G. D. WINTER, L.D.S., R.C.S., (Eng.)

## Assistant Dental Surgeons

MISS D. E. SPROULLE, L.D.S., R.C.S., (Eng.)
L. J. THRELFALL, L.D.S., R.C.S., (Eng.)

## School Nurses

*MISS B. LILLEY, Cert. San. Inst., Cert. Hygiene, B.E.
MISS A. M. DAWKINS, Cert. Med. Psych.
*MISS A. A. TROTTER.
*MISS L. M. OAKES.
MISS M. DURMAN.
*MISS M. McKENZIE.
MISS K. PAGE, Cert. Med. Psych.
MISS E. V. SALMON, Certs. C.S., M.M.G.
MISS I. HILL

## CITY MENTAL HOSPITAL.

## Medical Superintendent :

THOMAS BEATON, O.B.E., M.r., (Lond.) M.B., B.S., F.R.C.P. (Lond.)

## Assistant Medical Officers

I: E. STOKES, m.d. (Glas.), m.b., Ch.b., R.c.P.s. (Edin.), D.P.H. (Camb.)
A. F. GRIMBLY, M.A., M.D. (Dub.), B.A., M.B., B.Ch., B.A.O. (Dub.) D.P.M., R.C.P.S.

REGINALD WATERFIELD, L.R.C.P., L.R.C.S., (Dub.), (deceased).
VENEREAL DISEASES CLINIC.
Medical Officer (part time) :
A. CAMBELL, m.b., Ch.B.

## Pathologist (part time) :

J. A. D. RADCLIFIEE, m.b., B.Ch., B.A.o., R.U.I.
*Certified Midroife.

## POLICE DEPARTMENT.

Police Surgeons (part time) :
H. H. FISK, m.R.C.S., (Eng.), L.R.C.P. (Lond.)
R. HAMER HODGES, M.b., B.S., (Lond.), M.R.C.S., L.R.C.P., (Lond.).

## MEDICAL REFEREE, WORKMEN'S COMPENSATION ACT (part time).

ROGER H. EMMETT, B.A. (Camb.), m.A., M.r.c.s. (Eng.) L.r.c.p. (Lond.).

MEDICAL OFFICER, CORPORATION TRAMWAYS (part time).
J. C. A. McCALDEN, b.A., (Dub.), м.b., B.Ch., b.A.o.

## VETERINARY SURGEON (part time).

H. GREEN, m.r.c.v.s.

## PUBLIC ASSISTANCE DEPARTMENT.

Medical Superintendent, St. Mary's Hospital :
R. C. MACPHERSON, m.b., Ch.B. (Glas.)

## Assistant Medical Officers :

R. H. ZEITLAND, M.R.C.S., L.R.C.P. (Lond.)
C. W. F. BURNETT, M.B., B.S., M.R.C.S., I.R.C.P. (Lond.)
W. F. INGRAM, m.b., Ch.B., (Aberd.)

Dental Surgeon (part time)
D. A. BEVIS, L.D.S., R.C.S., (Eng.).

District Medical Officers (part time) :
A. E. MARWOOD, L.R.C.P., L.R.C.S., (Edin.)
A. E. CLARK, m.b., Ch.B., (Glas.).
C. H. BROWNE, L.R.C.P., I. \& L.M., D.P.H.
W. B. MASON, M.r.C.S., (Eng.), L.R.C.P., (Lond.).
J. C. DAVIS, m.b., Ch.B., b.A.o., (Dub.).
F. L. TITLEY, M.R.c.s., (Eng.), L.R.C.P. (Lond.).
H. J. BELI, B.A., L.R.C.P., L.R.C.S., (Edin.)

## Medical Officer's Report for 1930.

## To the Chairman and Members of the Health and Housing Committee.

Gentliemen,
For the thirty-fifth year in succession I beg to submit my Annual Report. From it you will see that speaking generally the health of the City has been satisfactory. The death-rate was 11.8, and with the exception of the prevalence of measles early in the year, the incidence of infectious disease was exceptionally light.

There have been no special features to call attention to, but progress has been made in various directions. Amongst these may be mentioned the decision of the Council to provide a public abattoir ; to extend the Milton Hospital for Infectious Diseases; and to provide further housing accommodation. Another matter which is receiving attention is a scheme for the co-ordination of the medical services of the City as provided for by the Local Government Act, 1929.

I take this opportunity of expressing my appreciation of the support of the members of the Health Department, and of the cordial co-operation of the heads and staff of other Municipal Departments.

I have the honour to be, Gentlemen,
Your obedient servant,
A. MEARNS FRASER, M.D.,

Medical Officer of Health.

## SUMMARY FOR 1930.

Civil Population (estimated to middle of 1929) 242,000

## 1.-GENERAL STATISTICS.

Area in Acres (1and and inland water)
Population (Census 1921) : Civil 233,929;
Naval and Military, 13,414 ... ... Total 247,343
Number of Inhabited Houses ... ... ... 57,591
Rateable Value, 1st April, 1930 ... ... £1,685,608
Sum represented by a Penny Rate ... ... $£ 6,575$
Average number of persons in each house (Census 1921) 4.7
Average number of persons per acre (Census 1921) 31.4
Total Rainfall ... ... 30.31 inches, 770 millimetres
2.-EXTRACTS FROM VITAL STATISTICS.

Births.
Legitimate 4,024
Illegitimate
237
Male
Female:
2,108
1,916
Birth Rate
16.3

Number of Women dying in, or in consequence of Childbirth: From Sepsis ... 7 Other Causes ... 4
Deaths of Infants under one year of age per 1,000 births: Legitimate ... 55 Illegitimate ... 67 Total 59

COMPARISON WITH PREVIOUS YEAR.

| ,, Under 1 year of age | 293 | 66 | 250 | 59 |

Average Deatm-Rate for previous Ten years (1920-1929)
*The Birth-rate is calculated on the total population and the Death-rates on the civil population only.

## STATISTICS AND SOCIAL CONDITIONS.

There is no change of any note to report upon in connection with the social conditions of the City. Southsea is rapidly developing as a popular seaside resort and the attractions for visitors are being rapidly increased. The mildness of the climate and the large amount of sunshine recorded render it peculiarly beneficial to the old and those in delicate health, and for those reasons it is becoming increasingly appreciated as a winter resort.

As regards the vital statistics, the last estimated population for the City is given by the Registrar General as being 261,400 ; the death-rates, however, are based upon the estimated civil population, viz., 242,000. I think it is probable that the coming census will show a considerable increase over these figures.

The total deaths registered were 2,856 ; this gives a death-rate of 11.8 , which is 2 per 1,000 less than the previous year. The death-rate for England and Wales was 11.4. There was a slight decrease in the deaths from pulmonary tuberculosis, and there were 334 deaths from cancer, as against 373 in the previous year. In the early part of the year measles became prevalent and accounted for the deaths of 101 children.

There was once again this year a slight decline in the birth-rate, which was 16.3 , and this is the same as the birthrate for England and Wales.

Full particulars in regard to the health statistics of the City are given in the following tables:

TABLE I.
Table showing the Population, Marriages, Inhabited Houses, Births and Deaths, for the year 1930, and the ten preceding years.

GROSS NUMBERS.

| Year | Estimated Population | No. of Inhabited Houses | Marriages | Registered Births | Total Number of Deaths |  |  |

SUMMARY OF TABLE V.

| Class | DISEASES | Number of <br> Deaths |
| :---: | :---: | :---: |
| I. | General Diseases | 883 |
| II. | Diseases of the Nervous System and Sense . Organs | 265 |
| III. | Diseases of the Circulatory System | 651 |
| IV. | Diseases of the Respiratory System | 307 |
| V. | Diseases of the Digestive System | 168 |
| VI. | Non-venereal Diseases of the Genito-urinary System and Annexa | 115 |
| VII. | The Puerperal State | 11 |
| VIII. | Diseases of the Skin and Cellular Tissue | 14 |
| IX. | Diseases of the Bones and of the Organs of Locomotion | 4 |
| X. | Malformations | 21 |
| XI. | Diseases of Early Infancy | 99 |
| XII. | Old Age | 201 |
| XIII | Affections produced by external causes | 115 |
| XIV. | Il1-defined Diseases | 2 |

## TABLE VI.

Table showing the Numbers and Death-rates per 1,000 of Population from the Seven Principal Zymotic Diseases, from Lung Diseases (excluding Phthisis), from Phthisis, and from all causes, during each Quarter and for the whole year 1930. (Civil population only.)

| Quarter ending | The Seven Principal Zymotic Diseases* All ages |  | Lung <br> Diseases (excepting Phthisis) $\dagger$ |  | Phthisis |  | From all Causes |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | Rate <br> per <br> 1000 | No. | Rate per 1000 | No. | Rate <br> per <br> 1000 | No. | Rate <br> per <br> 1000 |
| 1930 |  |  |  |  |  |  |  |  |
| March 31st | 119 | $1 \cdot 96$ | 140 | $2 \cdot 31$ | 59 | 0.97 | 880 | $14 \cdot 6$ |
| June 30th | 27 | $0 \cdot 44$ | 53 | $0 \cdot 87$ | 45 | $0 \cdot 74$ | 664 | $11 \cdot 0$ |
| September 30th | 14 | $0 \cdot 23$ | 43 | 0.71 | 50 | $0 \cdot 82$ | 595 | $9 \cdot 9$ |
| December 31st | 13 | 0.21 | 71 | $1 \cdot 17$ | 54 | $0 \cdot 89$ | 717 | 11.8 |
| Totals | 173 | $0 \cdot 71$ | 307 | $1 \cdot 26$ | 208 | $0 \cdot 85$ | 2856 | $11 \cdot 8$ |

* Includes Small-pox, Measles, Scarlet Fever, Whooping Cough, Diphtheria,

Enteric or Typhoid Fever, and Diarrhoea.
† Includes Laryngitis, Emphysema, Asthma, Bronchitis, Pneumonia, Pleurisy, and other Diseases of the Respiratory System.

TABLE VII.
Showing the number of Deaths in the Years 1861 to 1930, from the Seven Principal Zymotic Diseases.

| Year | Population | DISEASES |  |  |  |  |  |  | TOTALS |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Smallpox | Measles | Scarlet Fever | Diphtheria | Whoop'g Cough | Fever | Diarr- <br> hoea | Numbers | Rate per 1000 living |
| 1861 | 95220 | 1 | 3 | 5 | 6 | 11 | 111 | 152 | 289 | 3.06 |

INFECTIOUS DISEASES.-The following cases of infectious diseases were notified during the year:-

All the above cases have been visited, and such steps as were possible taken with a view to the prevention of the spread of the disease.

Small-pox.-No case of sinall-pox was notified in the City during the year. The usual particulars as to vaccination are given in Tables VIII. and IX. The Public Vaccinators are Dr. C. J. Mayhew and Dr. H. J. Bell.

Scarlet Fever.-There was a decrease in the prevalence of scarlet fever, the number of cases notified being 689 as against 787 in the previous year, but there were 9 deaths compared with 7 last year ; 609 , or 88 per cent., were removed to and treated at the Milton Hospital.

Diphtheria.-The decline in the number of cases of diphtheria which took place in 1929 was continued in this year, the number of cases notified being 605 as against 766 in 1929 and 866 in 1928. The number of deaths was 16, which is the lowest recorded in the City for over 30 years. I think it may be claimed that the arrangements referred to in my previous Annual Report made with Dr. Roberts, the School Medical Officer, for the throats and noses of all children to be swabbed for the presence of diphtheria at the end of their convalescence and before returning to school has been to some extent responsible for the reduced prevalence of the disease.

Ninety-four per cent. of patients suffering from diphtheria were removed to and treated at the Milton Hospital. Arrangements are made for medical practitioners to obtain a supply of diphtheria antitoxin at any time of the day or night.

Enteric Fever.--There were 40 cases of enteric fever notified during the year, but only one death. This is a larger
number than in any year since 1925, and is accounted for by a localised outbreak amongst children, in respect of which I reported as follows :-

OUTBREAK OF ENTERIC FEVER.
The first intimation received of the recent localised outbreak of enteric fever in the Landport district was a notification from a medical man that a child in Upper Church Path was suffering from this disease, and that he had under his care several other children with suspicious symptoms.

Since that date, 18 other children in the same neighbourhood have been notified suffering from enteric fever. Further, I have ascertained that in addition a number of other children had severe attacks of gastro-intestinal disturbance.

As a result of enquiries it was soon apparent that one factor common to all the cases of illness was attendance at a Sunday School Outing to Stakes Woods, near Waterlooville, on Thursday, May 29th, where the children drank from a stream running through the woods.

This outing was attended by 118 children and 10 adults, or 128 persons in all. Of these, 99 drank from the stream, 26 stated that they did not, and from 3 no definite statement could be obtained.

Amongst those who drank from the stream 19 subsequently developed enteric fever ; 27 suffered from severe attacks of abdominal pain, diarrhoea or vomiting within 72 hours of returning home; and a further 23 suffered from gastro-intestinal symptoms during the next three weeks. There was no illness during this period amongst the 29 who had not drunk from the stream, except that one child suffered from sores on the face the next day, and it is unlikely that this had any connection with the outing. It will be seen then, that 70 per cent. of the children who drank from the stream were subsequently ill, either immediately after or during the next few weeks.

A further curcumstance which points to the stream being the source of infection is the fact that the children who attended the Outing took their own food with them (they were also told to bring their own drinks). There was therefore no other article of diet common to all those who were taken ill, except the water from the stream.

The incubation period of enteric fever, i.e., the interval elapsing between the exposure to infection and the onset of the disease, is usually from 10 to 15 days, when, however, the virus is conveyed by water the period is somewhat longer. In the present case the water was drunk on May 29th and the onset of enteric fever in the first case was June 11 th, or 13 days later. In two cases the onset is given as June 25th, or 27 days after exposure to infection. The following table shows the period elapsing in each case between the drinking of the water and the onset of the disease :-

| In 1 case |  |  |  | 13 |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 case | " | ,' | , | 15th | ," |
| 2 cases | , | , | " | 17th | " |
| 3 cases | ," | , |  | 18th |  |
| 3 cases | ," | , | , | 19th | ", |
| 1 case | ,' |  | " | 20th |  |
| 2 cases | , | " | , | 21st |  |
| 2 cases |  |  |  | 22nd |  |
| 2 cases |  |  |  | 27th |  |

Although in a few of the above cases the incubation period is rather longer than usual, yet in none is it incompatible with the suggestion that the disease was contracted on May 29th.

Five of the patients who subsequently developed enteric fever had an attack of gastro-intestinal disturbance within a day or two of drinking the water, followed by an interval of apparent good health before the onset of the symptoms of the enteric fever.

The fever has been of a moderately severe type, but up to the present no deaths have resulted. All the patients but one have been removed to and treated at the Milton Hospital and in nearly every case the diagnosis has been confirmed by the Widal Test.

I visited Stakes Wood where the Outing took place, and found that the stream from which the children drank is the Hermitage Stream. It rises a little north of Waterlooville, passes through Stakes Woods, and eventually reaches Bedhampton, where it is piped under the Havant Road and eventually discharges into Langstone Creek. At the time of my visit, June 30th, there was very much less water flowing in the stream, than on May 29th, the bed of the stream showed marked evidence of sewage pollution, and a sample of the water which I took was analysed by Mr. R. P. Page, the City Analyst, who reported it to be " grossly polluted with matter of sewage origin." I ascertained that a little distance above Stakes Woods the stream receives the effluent from two sewage works and the condition of the stream strongly suggests that this effluent is not efficiently purified before being discharged.

I cannot find that there have been any cases of enteric fever recently notified in the Waterlooville district ; this, however, does not preclude the presence of the causal organism of enteric fever in the effluent from the sewage works.

Briefly summarised, the ascertained facts are as follows :-
(a) The 19 patients attacked by enteric fever all drank water from the Hermitage Stream on May 29th.
(b) 50 other children who drank the water at the same time were subsequently attacked with abdominal pain, diarrhoea, and sickness.
(c) The stream in question is grossly polluted with sewage.
(d) Other persons in the same party who did not drink the water did not suffer any illness.
(c) There have not recently been any cases of enteric fever in the Landport area, except amongst those who attended the Outing to Stakes Woods and drank the stream water.
In view of the above facts I am convinced that this outbreak of enteric fever is solely due to drinking the water from the Hermitage Stream on May 29th.

As the Hermitage Stream is situated outside the City boundaries, I have communicated the facts to the Medical Officers of Health of the districts concerned and to the County Medical Officer for Hampshire, in order that such steps may be taken as are necessary to protect the stream from pollution. The matter has also been reported to the Ministry of Health.

I may add that although in some few cases the illness took on a serious aspect, all the patients eventually made a good recovery.

Other Infectious Diseases.-As regards other infectious diseases I regret to say that after having for some years enjoyed comparative freedom from measles there occurred a severe outbreak in February and March, and altogether no fewer than 101 deaths were registered as being caused by this disease. Largely due to the fact that children who are developing measles are in a very infectious condition before the rash appears, it is almost impossible to control an epidemic once it has started in a community. Leaflets of advice were given to parents, and advice was given at the Child Welfare Centres and by the Health Visitors, but it was not until the end of March that the outbreak subsided. All the deaths except one occurred amongst children under five years of age. The deaths from Infuenza numbered 26, and from Whooping Cough six. At the beginning of the year three cases of psittacosis (parrot disease) occurred. These were traced to a parrot which was purchased just before Christmas, the owner of the parrot and his wife were both taken ill about January 9th and the former died on January 18th. The doctor who attended these patients also contracted the disease and only recovered after a very grave attack. This is the first occasion on which psittacosis is known to have occurred in Portsmouth; the disease is usually contracted from a diseased bird of the parrot species, but it is extremely rare for it to be transmitted from one person to another, as was apparently the case in regard to the doctor above referred to.

Twenty cases of ophthalmia neonatorum occurred, and all were visited by the Health Visitors. One case removed before the end of treatment and could not be traced. All the others recovered without impairment of the sight.

The accommodation at Milton Hospital again proved insufficient and the patients suffering from tuberculosis had to be discharged in February, in order to make room for patients suffering from diphtheria. It is expected that the work for the extension of the Hospital referred to in my last Report will now shortly be commenced.

TUBERCULOSIS.-The deaths from pulmonary tuberculosis numbered 208, against 192 in the previous year, and give a death-rate from this disease of 0.85 per 1,000 living. The number of cases of all forms of tuberculosis remaining on the register of notifications on 31st December, 1930, was 1,747, or 676 less than a year ago. These patients were as follows :-

| Males | $\ldots$ | $\ldots$ | Pulmonary <br> Tuberculosis | Non-pulmonary <br> Tuberculosis |
| :---: | :---: | :---: | :---: | :---: |
| Females | $\ldots$ | $\cdots$ | 668 | 202 |
| Total | $\overline{1351}$ | 194 |  |  |

During the year 582 new patients were seen by Dr. Revell, the Medical Officer, at the Tuberculosis Dispensary, and of these 310 , namely, 228 adults and 82 children, were found to be suffering from tuberculosis. Last year the number of new patients suffering from tuberculosis was 299.

Institutional treatment was provided for 367 ; 88 were in institutions at the beginning of the year and 279 were admitted during the year. It was again found necessary at the beginning of February to discharge the patients from the wards at Milton Hospital which are used for cases of tuberculosis, in order to make room for patients suffering from diphtheria.

In October the question of providing a sanatorium to take the place of Langstone was considered. The suggested accommodation to be provided was for 60 beds and the estimated cost was $£ 34,000$. Owing to the expense of building at the present time, and also to the fact that possibly the present shortness of beds for tuberculosis patients might to a certain extent be met by the co-ordination of medical services which is anticipated by virtue of the Local Government Act, 1929, it was decided not to proceed with the scheme for the present.

The following table gives particulars of the new cases of tuberculosis notified by medical practitioners during the year and deaths from this disease at various ages :-

TUBERCULOSIS.
NEW CASES AND MORTALITY DURING 1930.

[^1]VENEREAL DISEASE.-Very valuable work has again been carried on at the Venereal Diseases Treatment Centre, Royal Portsmouth Hospital, under the direction of Dr. A. Cambell. The great value to the community of this Treatment Centre will only be appreciated when it is realised how many children, the victims of congenital syphilis have here received such treatment as has enabled them to develop into healthy children. Dr. Cambell submits the following statement and tables in respect of the work at the Centre :-

The number of patients who attended the Centre for the first time was 52 more than in 1929, but the attendances were slightly less. This apparent discrepancy is due to the number of severe cases being less than in the previous year. The average number of attendances in a case of early syphilis is 30 and in gonorrhoea 120. While there were only 15 more cases of gonorrhoea, syphilis increased by 20 as a larger number of female children with congenital syphilis were sent up for treatment by the School Clinic and the Eye and Ear Hospital. In the early stages of acquired syphilis the figures are about the same.

Seventy-one patients in the later stages of syphilis were treated. In all these cases the infection dates back ten to thirty years ago and in most of them the disease is unsuspected until the appearance of symptoms of some severe organic lesion affecting the brain and spinal cord, or the heart and blood vessels. Some of them are parents in whom the disease is discovered only when their children come under treatment, that is to say that they are in a latent stage and do not suffer from any form of the disease which would send them to a doctor for advice. In all of them the Wassermann blood test is positive and they are treated, and although their chances of being completely cured are not so good as in the early stages, it is possible to prevent the disease progressing and making itself manifest later on. The father is most frequently the cause of congenital syphilis, the mother only rarely. If all men submitted themselves to a Wassermann test before marriage there would be practically no congenital syphilis.

For the last three years the number of patients treated has steadily risen, and there seems no prospect of a diminished incidence of venereal disease to any great extent, until more women come up for treatment. Prostitutes spread syphilis, but gonorrhoea is largely spread by amateurs, probably due to the fact that the symptoms of this disease in women may be so slight that they do not know they are infected.
There were two cases of gonorrhoeal vaginitis in children.
Patients sent up for examination and found not to be suffering from venereal disease amounted to 344 as against 322 for 1929.

> A. Cambeil, M.B.,
> Medical Officer in charge of V.D. Treatment Centre.

The following is the annual table prepared for the Ministry of Health, giving particulars of the work carried out at the Centre during the year :-

Statement showing the services rendered at the Treatment Centre during the year, classified according to the areas in which the jatients resided.

Name of County or County Borough (or Country in the case of persons residing elsewhere than in England and Wales) to be inserted in these headings.
A. Number of cases from each area dealt with during the year for the first time and found to be suffering from:-

E. Give the names of arsenobenzene compounds used in the treatment of syphilis the usual initial and final doses.
F. State the amount and kind of treatment usually administered to a case of Syphilis of each of the types usually dealt with at the Treatment Centre.
G. State the nature of tests applied in deciding as to discharge of patients referred to in Item 5 on previous page.

Neo-Salvarsan
Sulphostab Stabilarsan
(A description of the methods of treatment given to the various types of cases of Syphilis is too long to be inserted in this report.)

Gonorrhoea.-Tests of Cure :
Urine free from pus. Urethroscopic examination. Palpation of urethra on dilator. Palpation of prostate and seminal vesicles ; microscopical examination of resulting fluid for gonococcus, etc. Culture tests.

## Syphilis.

Primary-Negative Wassermann for 2 years.
Secondary-Negative Wassermann for 2 years after cessation of arsenical treatment.

MATERNITY \& CHILD WELFARE.-A large amount of work at the various Maternity and Child Welfare Centres has again been carried out by the Medical Officer, Dr. R. N. Foggie and the Health Visitors.

The new Child Welfare Centre at Trafalgar Place, Fratton, has greatly facilitated the work, and especially the arrangements for the issue of children's food have effected a great improvement.

The total number of attendances at all Centres was 29,149 , an increase of 1,826 over the previous year. As I reported in my last annual report, the demands upon the Medical Officer at the Centres are more than can be effectively dealt with by one officer.

The attendances at the various centres are given in the following table :-

| Centres |  | Atten- <br> dances | New <br> Patients | Seen by the <br> Medical <br> Officer |
| :--- | :---: | :---: | :---: | :---: |
| Fratton (2 afternoons a week) | $\ldots$ | 10521 | 766 | 4816 |
| Eastney (1 afternoon a week) | $\ldots$ | 5888 | 295 | 1793 |
| Portsea (1 afternoon a week) | $\ldots$ | 4060 | 210 | 1392 |
| Stamshaw (1 afternoon a week) | $\ldots$ | 5456 | 375 | 1374 |
| Cosham (1 morning a week) | $\ldots$ | 3224 | 112 | 546 |
| Totals | $\ldots$ | 29149 | 1758 | 9721 |

Ante-natal clinics were held at the Maternity Home on Friday mornings ; the patients were largely limited to those who were going into the Home for their confinements. The average attendance was 29 and the total number of patients was 327 . The question of the extension of the ante-natal clinic so as to enable advice to be given to any expectant mother who may apply is under consideration. I do not think, however, that the provision of ante-natal services can be expected to reduce the maternal mortality rate much below that registered in this City last year, namely, 2.3 per 1,000 births.

The total number of visits paid by Health Visitors was 13,635, a considerable increase over last year ; of these 3,943 were first visits to infants under one year of age and 1,539 visits were to children between the ages of 1 and 5 years. The Health Visitors also visited 20 cases of ophthalmia neonatorum, 6 cases of pemphigus neonatorum, 15 cases of puerperal fever, 22 cases of puerperal pyrexia, and 1 case of poliomyelitis.

The number of necessitous infants attending the Centres to whom food was issued was 1,566 , over 500 less than last
year ; the cost of the food issued was $£ 3,251$, and of this amount $£ 1,276$ was received in part payment from parents. We have to acknowledge with thanks the assistance of those ladies who have helped at the various centres, and especially the weekly attendance of Miss White to supervise the issue of food.

The infantile mortality rate was 59 deaths per 1,000 births, compared with a rate of 66 last year. The infantile mortality rate for England and Wales was 60.

MUNICIPAL MATERNITY HOME.-During the year 292 patients were admitted to the new Municipal Maternity Home in Trafalgar Place, Fratton Road ; this is an increase of 86 over the previous year. There were no maternal deaths in the Home, though there was one case of puerperal fever. Towards the end of July a very persistent outbreak of pemphigus neonatorum broke out, and as all the measures for control of the disease failed, it was decided to close the Home from July 21st to August 11th, the patients being sent to St. Mary's Hospital. The wards were thoroughly disinfected, and no further cases occurred on re-opening.

Under the direction of Dr. Foggie the work of the Home has been efficiently carried out by the Matron, Sister-in-charge and Staff. Dr. Stephen Green has again on many occasions rendered us very valuable assistance and attended at the Home during the absence of the Medical Officer.

The following table, required by the Ministry of Health, gives particulars of the year's work at the Home :-

$$
\text { No. of beds .. .. .. .. } 17
$$

Number of cases admitted during the year ..... 292
Average duration of stay ..... 14 days
Number of cases delivered by :
(a) Midwives ..... 281
(b) Doctors ..... 11
Number of cases in which medicalassistance was sought by amidwife .. .. .. .. 87

Number of cases notified as: (a) Puerperal Fever .. .. 1 (b) Puerperal Pyrexia.. .. 1

Number of cases of pemphigus neonatorum11

Number of infants not entirely breast fed while in the institution .. 53
Number of cases of ophthalmia neonatorum .. .. .. Nil.
Number of maternal deaths. . .. Nil.

Number of foetal deaths:
(a) Stillborn .. . . . 4
(b) Within 10 days of birth . . 2
(c) Causes of death :

Stillborn. 1 Transverse presentation
1 Brow presentation \& maceration
1 Anencephalus
1 Maceration
Within 10 days :
2 Prematurely
To the Maternity Ward of St. Mary's Hospital 178 patients were admitted. Particulars of the work done is given in the Annual Report of that Institution. In the Royal Naval Maternity Home there were 294 patients.

MIDWIVES.-The number of Midwives practising in the City was 73, and altogether they attended 3,112 confinements ; of these they attended as midwives in 2,740, and as maternity nurses in 372 cases.

INSURANCE SCHEME.-As regards the scheme of insurance for payment of the expenses of doctors called in by midwives the number of expectant mothers who insured was 1,850 , and the amount received in premiums was $£ 46210 \mathrm{~s} .0 \mathrm{~d}$. The total amount paid to medical men by the Local Supervising Authority was $£ 1,269$, and out of this there was recovered from patients (including the premiums) £561, or 44 per cent. I find that midwives sent for medical help in 39 per cent. of their cases when the patients were insured, but only in 22.5 per cent. when they were not insured.

MATERNAL MORTALITY.-Last year I reported that the maternal mortality rate in Portsmouth was extremely low, namely, only 3.4 deaths in mothers per 1,000 births. This year I am glad to record a still lower rate, namely, 2.3 per 1,000 births. Out of 4,261 births there only occurred 11 deaths amongst the mothers ; seven of these were due to sepsis and four to other causes. All cases of puerperal fever and pyrexia were visited by the Health Visitors, personal disinfection of the midwives was carried out, and arrangements were made for discontinuing practice for a period where deemed necessary.

Chart showing the number of Deaths under 1 year of age to 1000 Births in Portsmouth 1886 to 1930.

Table showing the Relationship of Temperature and Fatal Cases of Summer Diarrhoea.

ROLL OF MIDWIVES PRACTISING WITHIN THE CITY OF PORTSMOUTH

HOSPITALS.-From a reference to the preceding statement it will be seen that in the two general hospitals, the Royal Portsmouth and St. Mary's, there are altogether 1,358 beds, or $\underline{\underline{5} 3}$ beds per 1,000 population. Including the City Mental Hospital there are an additional 1,336 beds for special diseases. Proposals are in hand for increasing the accommodation at the Royal Hospital by 60 beds ; at the Milton Hospital by 84 beds, and at the City Mental Hospital by 124 beds. It is also proposed to provide a reception ward at St. Mary's Hospital, and a colony for mental defectives on Portsdown Hill. Although the Royal and the Eye and Ear Hospitals are used to a certain extent by persons outside the City, I am of opinion, when the above mentioned proposals are completed, and when the hospital services have been effectively co-ordinated, that the hospital accommodation available should be sufficient for the needs of the City.

Clinics and Treatment Centres.-The following clinics and treatment centres are provided by the City Council :-

The Tuberculosis Dispensary, Anglesey Road, at which the Medical Officer and Nurses attend daily.
The School Clinic, $103-5$ Victoria Road N., under the control of the Education Committee. The clinic is open daily, and the staff consists of the School Medical Officer, two full-time Assistant Medical Officers, three full-time Dental Surgeons, and one part-time Ophthalmic Surgeon, together with 9 Nurses, 3 Dental Attendants, and clerical staff. During the year 18,296 children were dealt with at the clinic, and the attendances numbered 63,643 (vide Report of School Medical Officer).
Maternity and Child Welfare Centres.-There are five Maternity and Child Welfare Centres, as follows :-Trafalgar Place, Clive Road, Fratton ; St. George's Church Hall, Portsea; St. Patrick's Hall, Eastney ; Winchester College Mission Hall, Stamshaw ; and the Institute, Cosham (vide p. 41).
Ante-natal Clinics are provided by the Local Authority at the Municipal Maternity Hospital and at St. Mary's Hospital, but are for the most part limited to patients who have booked beds at these institutions. An antenatal clinic is also held in connection with the Royal Naval Maternity Home and Child Welfare Centre.
Orthopaedic Clinic.-An orthopaedic clinic is held at the School Clinic, where a surgeon from the Lord Mayor Treloar Hospital at Alton atrends, and at this hospital

50 beds are maintained for Portsmouth children, and 5 beds are also maintained at the Treloar Home at Hayling Island.
The Treatment Centre for Venereal Diseases (vide p. 38 ) is held at the Royal Portsmouth Hospital, and is open daily.
An Out-patient Clinic for Mental Disorders is conducted on Thursday each week by Dr. T. Beaton, O.B.E., Medical Superintendent to the City Mental Hospital, at the Royal Portsmonth Hospital.
Instifutional Provision for the Care of Mental Defectives.-This is provided at St. Mary's Hospital, a portion of which is approved by the Board of Control for the accommodation of 29 male and 31 female adult mental defectives. Here all grades over the age of 16 years are treated. The Local Authority have now under consideration the provision of a Colony for Mental Defectives on a site within the City on Portsdown Hill. The projected scheme is eventually to provide accommodation for 500 defectives, and at present arrangements are in hand for the erection of an administration block, central kitchen, and six villas, four of which will each accommodate 60 patients, and two 40 patients, or 320 patients in all.

PROFESSIONAL NURSING IN THE HOME.-This is to a certain extent provided for by an arrangement with the Queen Victoria Nursing Association, to which the Council makes an annual grant of $£ 150$. During the year the Queen's Nurses attended 1,867 patients in their homes and paid 47,700 visits, these included 3,094 home visits paid to 268 patients at the request of the Health Department.

REGISTRATION OF NURSING HOMES.-With regard to the Midwives and Maternity Homes Act, 1926, Part II., and the Nursing Homes Registration Act, 1927, I have to report as follows :-
(1) Number of applications for registration ... 5
(2) Number of Homes registered ... ... 4
(3) Number of Orders mạde refusing registration ... 1
(4) Number of Appeals against such Orders ... Nil
(5) Number of applications for exemption from registration ... ... ... ... Nil
In addition to the above one other application was made, but was withdrawn after the premises had been inspected.

LOCAL GOVERNMENT ACT, 1929.-In the Administrative scheme adopted by the Council the medical services transferred to the Council under the above Act have been delegated to the Public Assistance Committee, with instructions that this Committee shall as soon as practicable report what services can be administered by existing committees of the Council and not by way of Poor Relief, and what steps should be taken to give effect thereto. At present consideration is being given to the question of the appropriation of St. Mary's, the Poor Law Hospital, under the Public Health Acts Amendment Act, 1907, for the purpose of administering it as a general municipal hospital. When this has been done a consultation will take place with the representatives of the voluntary hospitals, in order that the hospital services of the City can be co-ordinated to the best advantage.

AMBULANCE FACILITIES.-The following ambulance facilities are provided in the City: For infectious cases two ambulances are kept at the Milton Hospital. For general ambulance work the Council possesses four ambulances, two belonging to the Public Assistance Committee and two presented to the Council by the Portsmouth Volunteer Ambulance. These are all kept at St. Mary's Institution. In addition the Police maintain two ambulances for street accidents. The general ambulance service is available at any time, day or night, on application either to the Health Department or to St. Mary's Institution. Proposals are in hand for providing additional garage accommodation for ambulances at St. Mary's Hospital, for the purchase of new ambulances, and generally for making the service more efficient.

LABORATORY FACILITIES.-At the present time the bacteriological examination of throat swabs for the presence of diphtheria bacilli is carried out by the Public Analyst. The examination of sputum for tubercle bacilli is done by the Tuberculosis Officer at the Tuberculosis Dispensary. All other bacteriological investigations in connection with infectious diseases are carried out by the Pathologist to the Royal Portsmouth Hospital. It would be an advantage to the inhabitants of this City if the pathological laboratory at the Royal Hospital were licensed for animal inoculation, because at the present time all investigations in which this is necessary have to be sent to Iondon or elsewhere before a report can be obtained.

In connection with the diagnosis of infectious diseases
the following bacteriological examinations have been carried out during the year :-

| Disease | Resulit |  | Total |
| :---: | :---: | :---: | :---: |
|  | Positive | Negative |  |
| Diphtheria | 921 | 2216 | 3137 |
| Tuberculosis | 148 | 420 | 568 |
| Enteric Fever . . | 30 | 60 | 90 |
| Cerebro-spinal Meningitis (Spotted fever) | 3 | 2 3 | 5 5 |

LOCAL AND ADOPTIVE ACTS.-The following Local Acts, General Adoptive Acts and Bye-laws are in force :Local Acts.

The Portsmouth Corporation Act, 1883.
The Portsmouth Corporation Act, 1920.
The Portsmouth Corporation Act, 1930.
Adoptive Acts.
The Public Health Acts Amendment Act, 1890.
The Public Health Acts Amendment Act, 1907.
The Public Health Act, 1925, Sections 14, 17-26 (inclusive) 29-33 (inclusive), and 35 to 55 (inclusive), of Parts II. to V .
Bye-LAWS.
Offensive Trades, 1889.
Slaughter-houses, 1921.
Nuisances, 1893.
Common Lodging Houses, 1891.
New Streets and Buildings, 1928.
Nuisance by Dogs, 1928.

## SANITARY CIRCUMSTANCES OF THE CITY.

Water Supply. The water supply continues to be excellent as regards both quality and quantity. The results of the City Analyst's monthly chemical analysis of the water are given on page 91.

Drainage and Sewerage. The new sewerage scheme for Wymering has been commenced, and it is estimated that it will be completed in 18 months.

Seavenging. House refuse continues to be disposed of by means of controlled tipping ; this is carried out so as to
cause practically no nuisance, and a large area of marshy land at Cosham which has been used for the purpose will shortly form an excellent recreation ground. Consideration is being given to the installation of an improved form of vehicle for the collection of refuse.

Sanitary Inspection. Details of the work done in connection with the sanitary inspection of the City will be found in the Chief Sanitary Inspector's Report. The proposal mentioned in my last Annual Report for filling in and reclaiming the mudland at Stamshaw has had to be abandoned on account of the cost, one item being a charge of $£ 970$ by the Board of Trade for compensation. No steps have needed to be taken in connection with smoke abatement.

Food. A list of articles condemned as unfit for food will be found in the Chief Inspector's Report. The results of the examinations of the milk supplies are given in the Public Analyst's Report following this.

Public Abattoir. " Measures, as you are aware, have been taken to institute a Public Abattoir, and it is needless, I am sure, to dilate on the advisability of such an establishment . . . Two sites for the proposed Abattoir have been under discussion." It is interesting to note that the above appeared in the annual report of the Medical Officer of Health for Portsmouth, the late Sir George Turner, in the year 1877. As this was written 52 years ago it cannot be said that the matter of an abattoir has been unduly hurried. Still, we have now advanced to the stage where a definite site has been fixed, namely, on the western side of the Northern Road, and instructions have been given for the preparation of plans. There appears now every reason to hope that an abattoir for this City will be commenced during the coming year. There are at the present time 62 private slaughter-houses in use in the City ; of these, 13 have provisional annual licences, 45 are licensed, and 4 are registered.

Food and Drugs Adulteration Act. Particulars of samples taken and foods analysed will be found in the reports of the Public Analyst and Chief Inspector.

Municipal Disinfecting Fluid. During the year 9,500 gallons of electrolysed sea-water disinfecting fluid were manufactured at the municipal station in Park Road; 3,050 gallons were issued to the public, 2,340 gallons to the public elementary schools 2,280 gallons to the public swimming baths, and 1,830 gallons to hospitals.

Factories and Workshops.-The following tables give the number of inspections, the defects found, and action taken in connection with the supervision of factories, workshops and workplaces :-

| Premises | Number of |  |  |
| :---: | :---: | :---: | :---: |
|  | Inspections | Written <br> Notices | Occupiers <br> Prosecuted |
| Factories (including Factory Laundries) | 126 | 18 | Nil |
| Workshops (including Workshop Laundries) . | 519 | 28 | Nil |
| Workplaces (other than Outworkers' premises) | 49 | 7 | Nil |
| Total | 704 | 53 | Nil |

DEFECTS FOUND IN FACTORIES, WORKSHOPS AND WORKPLACES.

HOUSING.-The total number of new houses built during the year was 1,114 ; this is a decrease of 139 compared with those built in 1929.

Of new houses of the working class type 259 were built by the Council at the Eastern Road and Gladys Avenue Estates for the purpose of rehousing the tenants of slum properties. These complete the first instalment of the Slum Clearance Scheme which was initiated in 1929, and have enabled the Council to close a large number of dwelling-houses unfit for habitation and to re-house their tenants in excellent houses on two well-arranged and attractive estates.

It is satisfactory to find that although no reduction was made in the rents of the Council houses, which in nearly every case were higher than the tenants had previously paid, yet the arrears in rent at the end of the first year were less than one per cent. of the total rental.

One result of the demolition of slum properties in Portsea and the rehousing of their occupants in other districts is a complaint that the businesses of many tradesmen in Portsea have been seriously affected. For this reason urgent appeals have been made to the Council to build more houses in Portsea. Unfortunately, however, Portsea area is already much over-
built, its streets are narrow and its houses crowded together, in some places to the extent of over 30 to the acre. A large number of the houses which have been demolished were in narrow courts and alleys, or built in the back gardens of other houses, and to rebuild on these sites, even if this were permitted under the bye-laws, would be to reproduce exactly the unhealthy conditions which we are attempting to remedy. Here and there, it is true, the Council may be able to erect a few cottages or block of flats, but if the housing conditions in Portsea are to be brought to comply with modern ideas, it will be necessary, not to build more houses there, but still further to reduce the number of existing buildings.

Housing Programme. Towards the end of the year I submitted proposals for a five years' housing programme, and advised that, in each of the five years, operations should be simultaneously carried out under the following heads :-
(1) The provision of new houses to meet the shortage resulting from the cessation of building during the war and the period following.
(2) Unhealthy areas to be dealt with under the provisions of Part I. of the Housing Act, 1930.
(3) Single houses and groups of houses to be dealt with under Part II. of the Housing Act, 1930.
(4) The provision of small flats or houses for aged couples of limited means (Housing Act, 1930, Section 46).

These proposals were fully discussed by the Health and Housing Committee, and with slight modifications were adopted and subsequently confirmed by the Council. The proposals include the provision during the next five years of 2,300 new flats or houses, to be devoted to the following purposes :-
(1) To meet the present house shortage (Housing Act, 1924)
$\begin{array}{ccccc}\text { (2) To replace houses in unhealthy area (Housing } \\ \text { Act, 1930) } & \ldots & \ldots & \ldots & \ldots \\ 600\end{array}$
(3) To accommodate tenants from houses made subject to Demolition Orders (Housing Act, 1930)
(4) To accommodate aged couples of limited means
(Housing Act, 1930) $\ldots$... $\quad$... 200

The estimated charge on the rates for carrying out the above proposals is, for the first year $\frac{1}{2} \mathrm{~d}$. rate, for the second 1 d . rate, for the third $1 \frac{1}{2} \mathrm{~d}$., for the fourth $1 \frac{3}{4} \mathrm{~d}$., and for the fifth 2 d . T'The result of the adoption of a five years' programme will be to replace spasmodic attacks on housing conditions by a considered policy, which, if steadily pursued, cannot fail to prove of great advantage to the working classes of the City.

Housing Conditions. The standard of housing for the working classes, apart from overcrowding resulting from house shortage, is on the whole fairly good. There is an absence of large tenement buildings, nearly all the houses are self-contained, with small gardens, and an exceptionally large proportion are owned by the tenants and well looked after. On the other hand, in the older parts of the City, notably in Portsea and Iandport, there are many areas of narrow streets and alleys where, at a time before effective building bye-laws were in force, houses have been crowded together without any regard to sufficiency of air space. A number of these small groups of houses have been demolished but there remain many areas which, as circumstances permit, should be radically dealt with under the provisions of the Housing Acts.

Owing to the house shortage there is a considerable amount of overcrowding. Although a number of good type working class houses have been erected during the past few years, these have been built only for sale, and not to let. There are many hundred families living in one, two or three rooms who are urgently in need of better accommodation; these are not in a position to purchase a house and can only afford a small rent. This class is not catered for by the speculative builder, and there appears no likelihood of their needs being supplied except by the Local Authority or by a public utility society or building trust. A difficulty in the way of providing houses at a moderate rent is the fact that nearly all the available building land in the City has now been developed. There still remains a part of the estate purchased by the Corporation at Wymering ; this is a really excellent site for healthy houses, but has the drawback that it is some distance from the centres of employment.

During the year Closing Orders were made in respect of the following premises :-

[^2]Nos. 1, 2, 3, 4 and 5 Dorset Cottages, Portsea.
Nos. 2, 3, 4, 5 amd 6 Prince George Place, Portsea.
Nos. 1, 2, 3, 4, 5 and 6 St. John's Place, Portsea.
Nos. 1, 2, 3 and 4 Cross Street Place, Portsea.
Nos. 7 and 9 Blossom Alley, Portsea.
Nos. 1, 2, 3 and 4 Witley Place, Portsea.
Nos. 6, 11, 12, 13, 13a Blossom Alley, Portsea.
Nos. 1 and 2 Blossom Place, Blossom Alley, Portsea.
Nos. 1, 2 and 3 Blackthorn Court, Blossom Alley, Portsea.
Nos. 3, 3a, 2, 1, 17, 18, 19, 20 and 21 Blossom Alley, Portsea.
Nos. 1, 2, 3 and 4 Providence Court, Blossom Alley, Portsea.
Nos. 1, 2, 3, 4, 5 and 6 Primrose Alley, Portsea.
Nos. 1, 2, 3 and 4 Collins Court, Portsea.
Nos. 9 and 10 Primrose Alley, Portsea.
Nos.1, 2, 3, 4, 5, 6, 7, 9, 13, 14, 15, 16, 17, 18, 19, 20, 25, 26, 27, 28, 29, 30 and 31 York Place, Portsea.
Nos. 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14 and 15 Rudmore Terrace, Stamshaw.
Nos. 1, 2, 3, 4 and 5 Rudmore Cottages, Rudmore Square, Stamshaw.
The Cottage, The Shore, Rudmore, Stamshaw.
No. 69 Exmouth Road, Southsea.
No. 24 Lower Church Path, Landport.
Nos. 133 and 135 Arundel Street, Landport.
No. 103 St. Pauls Road, Southsea.
Nos. 3, 7, 9, 11, 13, 15, 25, 27, 29 and 31 Nancy Road, Fratton.
Nos. 1, 2, 3, 4, 5, 6, 7, 8 and 9 Reform Place, Marylebone Street, Southsea.
No. 33 Hawke Street, Portsea.
Nos. 1, 2, 3 and 4 Victoria Place, Havant Street, Portsea.
Nos. 1, 2 and 3 Wickham Place, Wickham Street, Portsea.
Nos. 1, 2 and 3 St. John's View, Prince George Street, Portsea.
Nos. 1, 2, 3, 4 and 5 Pollard Court, Queen Street, Portsea.
Nos. 18, 19, 20, 21, and 22 Merry Row, Landport.
Nos. $1,2,3,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20,21,22$, and 23 Providence Place, Commercial Road, Landport.
Nos. 1 and 2 All Saints View, Landport.
Nos. 13, 15, 17, 19, 21 and 23 Chalton Street, Landport.
Nos. 27, 28, 29, 30, 31, 32 and 34 Hawke Street, Portsea.
Nos. 1, 2 and 3 Wiggs Court, Clock Street, Portsea.
Nos. 3, 4, 5 and 6 Hampton Court, St. Thomas's Street, Portsmouth.
Nos. 10 and 11 Margery's Court, Butcher Street, Portsea.
Nos. 1 and 2 Oldfield Place, Prince George Street, Portsea.
Nos. 1 and 2 Unicorn Passage, Unicorn Street, Portsea.
Nos. 79, 80, 81 and 82 Frederick Street, Portsea.
Nos. 1, 2, 3, 4 and 5 Youngs Court, All Saints Road, Landport.
Nos. 48 and 50 Upper Church Path, Landport.
Nos. 1, 2, 3, 4, 5 and 6 Norfolk Place, Commercial Road, Landport.
Nos. 1, 2 and 3 Surrey Cottages, Surrey Street, Landport.
Nos. 1, 2, 3, 4 and 5 Crystal Place, Prince George Street, Portsea.
Nos. 1, 2, 3, 4, 5, 6, 7, 8 and 9 Munday's Court, St. George's Square, Portsea.
Nos. $43,44,45$ and 46 Cross Street, Portsea.
No. 1 East Street, Portsmouth.
No. 72 Broad Street, Portsmonth.
No. 3 Broad Street, Portsmonth.
No. 1 Tower Street, Portsmouth.
No. 10a Broad Street, Portsmouth.

No. 1 Dore's Court, Portsmouth.
No. 2 Dore's Court, Portsmouth.
Nos. 24, 26 and 60 White Hart Road, Portsmouth.
Nos. 5, 6, 7 and 8 Lennox Row, Portsea.
Nos. 1, 2, 3 and 4 Haig's Court, North Street, Portsea.
No. 9 Mary Street, Landport.
No. 53 Oxford Street, Landport.
Nos. 8, 10, 12, 14, 16, 18, 20, 22, 24 and 26 Seymour Street, Landport.
Nos. 5, 7, 9 and 11 Buckland Street, Landport.
Nos. 4 and 5 Cosy Cliff, Collyer's Pit, Portsdown Hill, Cosham.
The Bungalow, Cosy Cliff, Collyer's Pit, Portsdown Hill, Cosham.
Nos. 5, 6, 7 and 8 Albert Place, Cornwall Road, Fratton.
Nos. 12, 22, 23, 24, and 32 York Place, Portsea.

## Demolition orders were made in respect of :-

Nos. 1, 2 and 3 Clapperton Court, Britain Street, Portsea.
Nos. 1, 2, 3, 4 and 5 Willington Place, St. George's Passage, Portsea.
Nos. 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12 and 13 St. George's Passage, Portsea.
Nos. 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, and 14 Taylor's Court, Britain Street, Portsea.
No. 41 Britain Street, Portsea.
Nos. 32, 34, 36, 38 and 40 White Hart Road, Portsmouth.
Nos. 5, 6, 25, 26, 27, 28, 29, 30 and 31 York Place, Portsea.
The Cottage, The Shore, Rudmore.
Nos. 1, 3 and 4 York Place, Portsea.
Nos. 1, 2, 3 and 4 Collins Court, York Place, Portsea.
Nos. 1, 2, 3 and 4 Witley Place, Blossom Alley, Portsea.
Nos. 6 and 7 Blossom Alley, Portsea.
Nos. 1, 2, 3 and 4 Providence Court, Blossom Alley, Portsea.
Nos. 1, 2 and 3 Blackthorn Court, Blossom Alley, Portsea.
Nos. 1 and 2 Blossom Place, Blossom Alley, Portsea.
Nos. 17, 18, 19, 20, 21, 3, 3a, 13 and 13a Blossom Alley, Portsea.
Nos. 1, 2, 3, 4 and 5 Dorset Cottages, Prince George Street, Portsea.
Nos. 1, 2 and 9 Blossom Alley, Portsea.
Nos. 1, 2, 3, 4, 5 and 6 Fairlea, Prince George Street, Portsea.
Nos. 5 and 6 The Dell, Aylward Street, Portsea.
Nos. 2, 3, 4 and 5 Bateman's Alley, Portsea.
Nos. 1, 3 and 4 The Dell, Aylward Street, Portsea.
Nos. 6 and 10 Primrose Alley, York Place, Portsea.
Nos. 2, 7, 13, 23, 14, 9, 16, 20 and 15 York Place, Portsea.
No. 69 Exmouth Road, Southsea.
Nos. 3, 7, 9, 11, 13, 15, 25, 27 and 29 Nancy Road, Fratton.
Nos. 31, 32, 33 and 34 Hawke Street, Portsea.
Nos. 1, 2, 3 and 4 Victoria Place, Havant Street, Portsea.
Nos. 1 and 2 Wickham Place, Wickham Street, Portsea.
Nos. 21 and 22 Merry Row, Landport.
No. 2 All Saint's View, Landport.
Nos. 2, 13, 14 and 15 Providence Place, Landport.
Nos. 27, 28, 29 and 30 Hawke Street, Portsea.
No. 9 Reform Place, Southsea.
No. 2 Wiggs Court, Clock Street, Portsea.
Nos. 3, 4, 5 and 6 Hampton Court, St. Thomas's Street, Portsmouth.
Nos. 1, 2 and 3 St. John's View, Prince George Street, Portsea.
Nos. 79, 80, 81 and 82 Frederick Street, Portsea.
Nos. 1, 2, 3, 4 and 5 Young's Court, All Saints' Road, Landport.

The tenants of the foregoing dwelling-houses were accommodated for the most part on the housing estates provided by the City Council in the Eastern Road and Gladys Avenue.

The following housing statistics, prepared for the Ministry of Health, are given of work carried out in connection with dwelling-houses, and further details are given in the Chief Sanitary Inspector's Report, p. 72.
Number of New Houses erected during the Year :-
(a) Total (including numbers given separately under (b) ). .. 1114
(i) By the Local Authority .. .. .. .. 259
(ii) By other Local Authorities .. .. .. none
(iii) By other bodies and persons .. .. .. 855
(b) With State assistance under the Housing Acts :-
(i) By the Local Authority:
(a) For the purposes of Part II of the Act of 1925 .. none
(b) For the purposes of Part III of the Act of 1927 . . 259
(c) For other purposes .. .. .. .. none
1.-INSPECTION OF DWELLING-HOUSES DURING THE YEAR :-
(1) Total number of dwelling-houses inspected for housing defects (under Public Health or Housing Acts) and the number of inspections made
(2) Number of dwelling-houses (included under sub-head (1) above) which were inspected and recorded under the Housing Consolidated Regulations, 1925, and the number of inspections made
(3) Number of dwelling-houses found to be in a state so dangerous or injurious to health as to be unfit for human habitation136
(4) Number of dwelling-houses (exclusive of those referred to under the preceding sub-head) found not to be in all respects reasonably fit for human habitation.90

2.-Remedy of Defects during the Year without the
Service of Formal Notices.

Number of defective dwelling-houses rendered fit in consequence of informal action by the Local Authority or their Officers
3.-Action under Statutory Powers during the Year.
A.-Proceedings under Section 3 of the Housing Act, 1925.
(1) Number of dwelling-houses in respect of which notices were served requiring repaits
(2) Number of dwelling-houses which were rendered fit after service of formal notices
(a) By owners .. .. .. .. .. 43
(b) By Local Authority in default of owners .. 31
(3) Number of dwelling-houses in respect of which Closing Orders became operative in pursuance of declarations by owners of intention to close
B.-Proceedings under Public Health Acts.
(1) Number of dwelling-houses in respect of which notices were served requiring defects to be remedied
(2) Number of dwelling-houses in which defects were remedied after service of formal notices
(a) By owners
(b) By Local Authority in default of owners .. none
C.-Proceedings under Sections 11, 14 and 15 of the Housing Act, 1925.
(1) Number of representations made with a view to the making of Closing Orders
(2) Number of dwelling-houses in respect of which Closing Orders were made314
(3) Number of dwelling-houses in respect of which Closing Orders
were determined, the dwelling-houses
$\left.\begin{array}{llccc}\text { rendered fit } & \text {. } & \ldots & . . & . .\end{array}\right]$
$\begin{array}{ccccc}\text { (4) Number of dwelling-houses in respect of which } & \text { Demolition } \\ \text { Orders were made . . } & \text {. . } & \text {.. } & \text {. } & \text {. . } \\ 154\end{array}$
$\begin{array}{cccccc}\text { (5) Number of dwelling-houses } & \text { demolished in } & \text { pursuance of } & \\ \text { Demolition Orders } & \text {.. } & \text {.. } & \ldots & \text {. . } & 142\end{array}$
4. -Number of Houses owned by Local Authority :
(1) Houses owned at 1st April, 1929 .. .. 1008
(2) Constructed under Part III, Housing Act, 1925, during the last two years .. .. .. 381

## SUMMARY OF METEOROLOGICAL STATISTICS, 1930.

Barometer.-The mean barometer pressure for the year was 29.922 inches. The highest observed reading corrected to sea-level was 30.770 on November 12th and the lowest 28.791 on February 1st.

Temperature.-The mean temperature in the shade was $51.6^{\circ}$, or $0.8^{\circ}$ above the normal.
Maximum.-The mean maximum temperature in the shade was $66.0^{\circ}$, the highest being $83^{\circ}$, on August 28th.
Minimum.-The mean minimum temperature was 38.6, the lowest being $24^{\circ}$ on March 20th.
Minimum on Grass.-The mean minimum temperature on the grass was $40.6^{\circ}$, the lowest being $16^{\circ}$ on November 17 th.

Earth Temperature.-The mean temperature at 1 foot below the ground was $53.0^{\circ}$, and that at 4 feet $53.6^{\circ}$.

Bright Sunshine. $-1,730$ hours of sunshine were registered by the Campbell-Stokes Recorder. The greatest amount registered on one day was 14 hours 54 minutes, viz., on June 5th.

Frosts.-The minimum thermometer in the shade, four feet above the ground fell to and below freezing point on 28 days, and that on the ground on 57 occasions.

Humidity.-The mean humidity of the air (Saturation 100) was 84.2
Rainfall.-The total rainfall was 30.65 inches or 0.89 inches above the normal. The greatest fall of rain in 24 hours was 0.89 inches, on January 4th.

Hail.-Hail occurred on 1 occasion.
Thunder.-Thunder occurred on 7 occasions.
Snow.-Snow or Sleet fell on 5 occasions.
Fogs.-Fogs occurred on 14 occasions.
Gales.-Gales occurred on 6 occasions.

Isolation Hospitals or Sanatoria-1. Milton Hospital for Infectious Diseases.

## APPENDIX.-TAble III. Infant Mortality.

## Nett Deaths from stated causes at various Ages under 1 Year of Age.

## Port Sanitary Authority.

To the Chairman and Members of the Port Sanitary Authority. Gentlemen,

There were no cases of infectious disease amongst the ships arriving at this port. During the year 6,987 vessels in all arrived at the port, 491 of these were inspected by the Port Sanitary Inspector, and in 36 of these insanitary conditions were detected, all of which were remedied before leaving port.

Of vessels arriving, 447 were from coastwise ports, 214 from foreign ports, and 6,326 from the Solent.

The nationality of vessels was as follows :-

| British | $\ldots$ | 6876 | Belgian | $\ldots$ | 2 |
| :--- | ---: | ---: | :--- | :--- | :--- |
| French | $\ldots$ | 41 | Italian | $\ldots$ | 1 |
| German | $\ldots$ | 19 | Danish | $\ldots$ | 1 |
| Norwegian | $\ldots$ | 10 | Esthonian | $\ldots$ | 2 |
| Dutch | $\ldots$ | 16 | Finnish | $\ldots$ | 1 |
| Swedish | $\ldots$ | 17 | Dantzig | $\ldots$ | 1 |

I have the honour to be, Gentlemen, Your obedient servant, A. MEARNS FRASER, M.D., Medical Officer of Health.

## Milton Hospital.

## REPORT OF THE MEDICAL SUPERINTENIDENT.

To the Chairman and Members of the Hospital Committee.
Gentlemen,
I have the honour to submit my Annual Report for the year ending December 31st, 1930.

The number of admissions was 1,311 , as against 1,506 the previous year.

The number of deaths was 39, discharged 1,076 , remaining 197. The combined mortality in respect of all deaths was 2.9 per cent.

Scarlét Fever.-Admitted 609; last year 702; discharged 531 ; died 7 ; remaining 72 . The fatality rate was 1.1 per cent.

Diphtheria.-Admitted 570 ; last year 727 ; discharged 458 ; died 16 ; remaining 93 . The fatality rate was 2.8 per cent. Of four cases admitted for Diphtheria, 1 died of Scarlet Fever, 2 of Measles, and 1 of Meningitis.

Enteric Fever.-Admitted 32 ; discharged 32. There were no deaths.

Tuberculosis.-Admitted 84 ; discharged 45 ; died 9 ; remaining 30 . The fatality rate was 10.7 per cent.

MEASLES.-Admitted 6; discharged 6; died 2.
Cerebro-spinal Meningitis.-Admitted 8; discharged 4 ; died 4. The fatality rate was 50 per cent.

Erysipelas.-Admitted 2; discharged 0; remaining 2.
Your obedient servant, JAMES McGREGOR, Medical Superintendent.

## GENERAL INSPECTION.

DWELLING-HOUSES. - 5,964 dwelling-houses were inspected, and 17,856 re-inspections were made whilst work ordered to be carried out was in progress.

Complaints.- 1,903 complaints were made at the office and received attention.

SlaUGHTERHOUSES. - 1,420 visits were made to the slaughterhouses. There were 62 in actual regular use on December 31st, 13 being annual licences; these have been all well kept.

Dairies, Cowsheds and Milikshops.- 1,450 visits were made to the registered Dairies, Cowsheds and Milkshops. There are 504 retail purveyors, 18 wholesale dealers in milk, and 3 cowkeepers carrying on business in the City, and these premises have been well kept.

Under the Milk (Special Designations) Order 1922, 28 licences for the sale of Certified, Grade A ('Iuberculin tested), Grade A and Pasteurized Milk were issued.

Common Lodging Houses.- 173 visits were made to the eight registered Common Lodging Houses.

Workshops.-678 visits were made to the Workshops, which have been well kept, and 121 visits to out-workers' premises. 25 complaints were received from H.M. Inspector of Factories, all of which received attention.

BakEhouses.- 288 visits were made to the different Bakehouses, most of which were found to be kept in a cleanly condition.

Sausage Manufactories.- 385 visits were made to these premises, which were kept in a satisfactory manner.

Old Drains.-2,119 old drains were tested or re-tested.
New Drains and Fittings.-2,284 new drains were tested or re-tested and 2,385 sanitary fittings were examined.

Occupation Certificates.- 1,114 Occupation Certificates were issued with respect to new buildings.

Sanitary Certificates.-14 Sanitary Certificates with respect to the sanitary condition of the drains and fittings of old dwelling-houses have been issued.

Increase of Rent and Mortgage Interest (Restriction) Acr', 1920.--Under this Act 14 certificates relating to
dwelling-houses not being kept in a reasonable state of repair were granted to the tenants.

Merchandise Maris Act, 1926, and Agricultural, Produce (Grading and Marking) Act, 1928.-Under the above Acts Orders in Council have been made in relation to the marking of the following imported food stuffs :-Firesh Apples, Raw Tomatoes, Eggs (hen or duck eggs in shel1), Dried Eggs, Oat Products (Oatmeal, Rolled Oats, Oat Flour and Groats), Currants, Sultanas, Raisins and Honey. During the year 1,206 visits were paid to various shops to ensure compliance with the provisions of the above Orders. A large number of traders were cautioned, and in one case legal proceedings were instituted against a person for obliterating the " indication of origin" mark from imported eggs and selling the same. A conviction was secured in the Police Court and a fine of $£ 20$ and costs imposed.

Rats and Mice (Destruction) Act.-459 visits were made to rat infested premises and 24 notices were served.

Infectious Diseases.- 1,424 cases of infectious diseases were visited and investigated, and 1,455 rooms were disinfected by the disinfector.

I am, Gentlemen,
Your obedient servant.
C. W. HALL,

Chief Sanitary Inspector.

## Report of Meat Inspector

 and
## Inspector under The Diseases of Animals Acts.

> A. Mearns Fraser, Esq., M.D.,
> Medical Officer of Health.

Sir,
I beg to present my report for the year ending 31st December, 1930.

The following is a list of animals brought into the City of Portsmouth:-

Arriving by ferry boats from Isle of Wight:
Beasts ... ... 1,612

Inspection of Cattle Docks, Trucks and Ferry Boats.-The cattle docks and trucks have been kept clean and disinfected. Ferry boats are a great improvement over the tow-boats which were in former use for transport of animals to Portsmouth from the Isle of Wight. There has been a
number of complaints referring to cattle being separated in Bath Square, near the point of landing, before being driven to their respective destinations. As there are no pens where stock may be separated, or detained if necessary, this nuisance cannot be abated, and breaches of the Contagious Diseases Animals Acts are constantly taking place.

Inspection of Cosham Markeit.-All live stock exposed for sale at this market during the year has been of good quality. After sales take place all litter is removed and burned, and pens are washed down and disinfected.

Swine Fever Order, 1922.-During the year 999 licences were issued for movement of 4,414 swine, and 2,084 licences were received in connection with movement of 18,486 swine into this City. Two serious cases of swine fever occurred at the allotment holders' premises at Hilsea, involving over 100 pigs. The piggeries affected were placed, as required, under movement restrictions. Piggeries of which there are about 50 are scattered over a wide area, and it is impossible to keep them under proper supervision. I think one condition that I have observed is worthy of note, and that is, that in this City swine fever has only occurred amongst animals which have been swill fed.

Importation of Dogs Orders.-Forty-three notifications were received from the Customs referring to dogs brought from foreign parts, and were dealt with as provided in the Orders.

Tuberculosis Order, 1925.-I have regularly visited cowsheds and inspected cows kept for milk production. Two cows showing symptoms of tuberculosis were slanghtered, and the presence of this disease was confirmed on postmortem examination.

Sheep-scab Order, 1928.-Under this Order numbers of sheep from infected districts were moved for slaughter to Portsmouth and the skins afterwards disinfected.

Conveyance of Live Poultry Order, 1919.—Boxes and crates, etc., used for conveyance of poultry, principally to and from Cosham market, were inspected and found kept in a cleanly condition.

Transit of Animals Order, 1930.-This Order (except Art. 5) became operative in October, and provides principally for the cleansing and disinfecting of vehicles used for conveyance of animals and the keeping of records of stock carried in the same. Records so kept aid in tracing animals which
may have been moved from a market where disease is subsequently found to exist. Article 5 becomes operative in October 1931, and deals with the construction of motors used for conveyance of animals by road.

Slaughter-houses.-There are 62 of these in use in Portsmouth. They have been kept in a fairly cleanly condition during the last twelve months. I have to report that a large amount of diseased and tubercular meat is being sold in this City, owing to ignorance and unscrupulousness. Carcases are boned out and the meat sold as cuttings or in sausages. At present it is impossible to prevent this taking place.

Retail Meat Shops, Etc.-These premises have been kept in a fairly clean condition, but there have been breaches of the Meat Regulations, 1924, by a number of butchers in hanging meat beyond the level of their shops. They have been warned that proceedings will be taken if further infringement takes place.

Caseous Lymphadentitis.-During the year I inspected 10 per cent. of 12,682 carcases of mutton which had arrived in this city subject to inspection. I found on inspection only eight parts of carcases slightly affected by the above disease. As inspection at the source of export is now very rigid, I would suggest, as the percentage affected is low, that examination here be dispensed with. It is impossible to carry out adequately the inspection of slaughter-houses, shops and piggeries, etc., and this additional worl.

I am, Sir,
Your obedient servant, D. A. HOGG,

Meat Inspector and Inspector under the Diseases of Animals Acts.

## The Public Analyst's Report.

> The Chemical Laboratory, 16 Arundel Street, Portsmouth.

To the Chairman and Members of the Health and Housing Committee.
Gentlemen,
I beg to submit my Report on the work carried out in my Department during the year ending 31st December, 1930.

The percentage of detected adulteration is slightly lower than that of the previous year.

In spite of the large number of bacteriological examinations of Diphtheritic material the analytical work has been well maintained.

During the year Mr. J. A. Radley, who was Pupil Assistant in the Laboratory, obtained a London B.Sc. Degree with Honours, and he subsequently obtained his Associateship of the Institute of Chemistry, taking his examination in January of this year.

I have to record my appreciation of the work of Mr , C. M. Beckett, without whose loyal co-operation it would be impossible to carry out the increasing work year by year, and of the thorough and conscientious manner in which Inspector E. J. G. Sinnett carries out his duties at all times.

> I remain, gentlemen,
> Your obedient servant, REGINALD P. PAGE, Public Analyst.

27th July, 1931.

## REPORT OF THE PUBLIC ANALYST.

During the year ending 31st December, 1930, the number of samples and specimens examined was 4,565 , which may be briefly summarised as follows :-

|  |  |  | 1930 | 1929 |
| :---: | :---: | :---: | :---: | :---: |
| Food and Drugs Act | $\ldots$ | $\ldots$ | 1239 | 1240 |
| " Graded " Milks | $\ldots$ | $\ldots$ | 123 | 140 |
| Samples taken at Farms | $\ldots$ | $\ldots$ | 17 | 32 |
| Water | $\ldots$ | $\ldots$ | 14 | 22 |
| Paints, Oils, Soaps, etc. | $\ldots$ | $\ldots$ | 11 | 33 |
| Diphtheritic Material | $\ldots$ | $\ldots$ | 3137 | 542* |
| Miscellaneous | $\ldots$ | $\ldots$ | 24 | 38 |
|  |  | Totals | 4565 | 2047 |

The number of samples taken in connection with the Food and Drugs Act is 1,239. This gives an average of one sample for every 195 persons in the City, or a "Sample Rate" of $5 \cdot 1$ samples for 1,000 persons.

The nature of the samples analysed, the number adulterated or of inferior quality, is shown in the following table :-

TABLE A.

| Nature of Sample | Nuinber <br> Examined | Number Genuine | Number <br> Inferior | Number Adulterated | Percentage Adulterated |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Milk | 606 | 563 | 11 | 32 | $5 \cdot 2$ |
| Skim Milk | 1 | 1 |  |  |  |
| Cream . | 16 | 16 | . | . | $\cdots$ |
| Butter | 109 | 109 | . |  |  |
| Margarine | 67 | 67 | $\cdots$ | $\cdots$ |  |
| Lard . | 6 | 6 | . |  |  |
| Dripping .. | 4 | 4 | . | . |  |
| Coffee | 46 | 46 | . |  |  |
| Cocoa | 55 | 55 | $\cdots$ |  |  |
| Tea | 24 | 24 | . | . | . |
| Cheese | 7 | 7 | . | . | . |
| Lemon Curd | 8 | 8 | . | $\cdots$ | $\cdots$ |
| Pepper | 21 | 21 | $\cdots$ |  |  |
| Mustard . . | 35 | 34 | . | 1 | $2 \cdot 8$ |
| Ground Ginger . . | 13 | 11 | . | 2 | $15 \cdot 3$ |
| Ground Almonds | 5 | 5 | . | . | . |
| Baking Powder . . | 6 | 6 | . | $\ldots$ | . |
| Rice . | 14 | 14 | . | $\ldots$ |  |
| Pearl Barley | 12 | 12 | $\cdots$ | - | . |
| Arrowroot . . | 8 | 8 | . |  | . $\cdot$ |
| Vinegar .. . . | 3 | 2 | . | 1 | $33 \cdot 3$ |
| Self Raising Flour | 3 | 3 | . | . . | . |
| Sausages . . | 9 | 9 | . | . | . |
| Brawn .. . | 2 | 2 | . | . | . |
| Cooked Meat . . | 1 | 1 | . | . | $\cdots$ |
| Fish Paste | 2 | 2 | . | . | $\cdots$ |
| Mincemeat | 4 | 4 | . | $\cdots$ |  |
| Cream Buns . . | 7 | 3 | . | 4 | $57 \cdot 1$ |
| Sultanas . | 7 | 7 | . | . | . |
| Raisins | 7 | 7 | . | . | $\cdots$ |
| Currants .. | 7 | 7 | . | . | . |
| Mixed Candied Peel | 3 | 3 | . | . | . |
| Cinnamon . | 4 | 4 | . | $\ldots$ | . |
| Gregory Powder | 3 | 3 | . | . | . |
| Cream of Tartar | 1 | 1 | . | . | . |
| Tartaric Acid | 7 | 7 | . |  | . |
| Bicarbonate of Soda . . | 6 | 6 | . . | . | . |
| Boric Powder . . . | 5 | 5 | . | . | . |
| Exsiccated Magnesium Sulphate | 4 | 4 | . | . | . |
| Boracic Ointment . | 6 | 6 | . | $\cdots$ | . |
| Zinc Ointment . . | 6 | 6 |  | . | . |
| Olive Oil . . . | 4 | 4 | . | . | . |
| Orange Quinine Wine | 3 | 3 | . | . | . |
| Non-Alchoholic Wine .. | 3 | 3 | $\cdots$ |  | -0 |
| Whiskey . | 50 | 45 | . | 5 | $10 \cdot 0$ |
| Gin . . | 19 | 19 | . | . | . |
| Total | 1239 | 1183 | 11 | 45 | $3 \cdot 6$ |

# TABLE B. ADULTERATED SAMPLES. 

## TABLE C.

Showing the number of samples analysed and the number adulterated in Portsmouth during the last five years :-

|  | Year | Samples Examined | Number Adulterated | Percentage <br> Adulterated |
| :---: | :---: | :---: | :---: | :---: |
| Portsmouth | 1926 | 1,202 | 57 | 4.7 |
| Do. | 1927 | 1,261 | 53 | 4.2 |
| Do. | 1928 | 1,295 | 60 | 4.6 |
| Do. | 1929 | 1,240 | 54 | 4.3 |
| Do. | 1930 | 1,239 | 45 | 3.6 |
| England \& Wales | 1928 | 129,034 | 7,524 | 5.8 |
| Do. | 1929 | 133,584 | 7,260 | 5.4 |

MILK.
The following table gives the statistics of the adulteration of Milk during the last five years :-

TABLE D.

TABLE E.
Showing the average amount of Milk Fat and of Solids-not-Fat for each month in the year :-

FARMERS' SAMPLES.
Forty-two samples of Milk were taken during the year, representing the milk supplied to Retailers in the City, and
of these seven were found to be adulterated. Legal proceedings were instituted in four cases, and fines amounting to $£ 61 \mathrm{~s}$. Od. were inflicted. In one case a letter of caution was sent by the M.O.H. ; no proceedings were instituted in the other two cases, for after visiting the farm and seeing the cows milked, it was found the milk did not come up to the legal standard.

## MILK SUPPLIED TO LOCAL INSTITUTIONS.

Seventy-one samples were obtained from St. Mary's Hospital, Kingston Prison, and the various Hospitals in the City. All were returned as genuine.

## MILK AND DAIRIES (AMENDMENT) ACT, 1922. <br> " Certified Milk."

Examined 23 ; Passed 21 ; Rejected 2.
Certified Milk is produced from specially selected herds of cows, which are subjected to frequent Veterinary Inspection,

The Milk is put up in sterilized bottles, sealed at the farm and is not opened until actually required by the Consumer.

The standards for "Certified Milk " are :-_" Not more than 30,000 Bacteria in one cubic centimetre, and "Bacillus Coli " to be absent from one-tenth of a cubic centimetre, of the milk. The milk shall not be treated at any stage by heat."

The 23 samples examined gave an average of 4,545 Bacteria per cubic centimetre, and 2 samples failed to pass the " Bacillus Coli" test.

The average amount of Milk Fat was 4.04 per cent. and of Solids-not-fat $9 \cdot 16$ per cent.

The average retail price of this milk for the year was 1s. 2d. per quart.

The results show that a very high standard for both Cleanliness and Quality has been maintained during the year. That there will always be a market for Certified Milk is quite certain, but it is to be feared that the high price will be a limiting factor where this grade of milk is concerned.

## " Grade A. (Tuberculin Tested) Milk."

## Examined 54 ; Passed 42 ; Rejected 12.

This Milk is produced from cows which have been certified free from disease, and which are subjected to the Tuberculin Test at intervals of six months. The standards for this Grade of Milk are: " not more than 200,000 bacteria
per cubic centimetre, and ' Bacillus Coli' absent from onehundredth of a cubic centimetre of the Milk." The milk shall not be treated at any stage by heat.

Grade A. (Tuberculin Tested) Milk is delivered to the Retailer in bulk and bottled locally.

The 54 samples examined gave an average of 10,698 Bacteria per cubic centimetre, and on 12 occasions the milk failed to pass the " Bacillus Coli" test.

The average amount of Milk Fat was 4.26 per cent. and of Solids-not-Fat 8.86 per cent.

The average retail price for the year was 8 d. per quart.
The Grade A. ('T.'T.) Milk sold in Portsmouth during the year has been the product of five producers, of which two have been responsible for eight of the rejected samples. Neither of these producers now send milk to the City. Bearing this in mind it is evident that a good standard of quality and cleanliness has been maintained, and it is satisfactory to record that the consumption of this Grade of Milk is steadily increasing.

## " Grade A" Milk.

## Examined 46 ; Passed 35 ; Rejected 11.

Grade A Milk is to be produced and treated under such conditions that a sample taken at any time between Production and Delivery to the consumer shall not contain " more than 200,000 bacteria per cubic centimetre, and "Bacillus Coli" shall be absent from one-hundredth of a cubic centimetre." The milk shall not be subjected to heat at any stage.

In other words, it is milk produced under what should be normally clean conditions, and it is delivered in sealed churns to the Retailer and bottled locally.

The price throughout the year has been one penny per quart more than milk of ordinary quality.

The 46 samples examined contained an average of 17,162 Bacteria per cubic centimetre, and on nine occasions the milk has failed to pass the "Bacillus Coli" test. The average amount of fat was $3 \cdot 32$, and of Solids-not-Fat 8.76 per cent.

Nine of the eleven rejected samples were the product of one particular farm.

## BUT'TER.

109 samples of Butter were analysed during the year, all of which were found to be genuine and free from Preservatives.

The following Table gives the number of samples of Butter analysed, the number adulterated, and the percentage of adulteration during the last five years :--

TABLE F.

|  |  | Year | Samples Examined | Number Adulterated | Percentage of Adulteration |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Portsmouth |  | 1926 | 125 | 0 | . |
| Do. | . | 1927 | 138 | 1 | 0.7 |
| Do. | . | 1928 | 109 | 4 | 3.6 |
| Do. | . | 1929 | 118 | 0 | . . |
| Do. | . | 1930 | 109 | 0 | $\cdots$ |
| England \& Wales | . . | 1929 | 10,965 | 149 | 1.3 |

## MARGARINE.

67 samples of Margarine were examined and found to be free from Preservatives.

In no case was excessive water detected, and the samples were all correctly labelled, as required by the Sale of Food and Drugs Act.

## JAM.

During the last few months an observation of the Jam offered for sale would have revealed the fact that an entirely new label has made its appearance. Whereas in the past the nature of the jam has been boldly set out in large type, a close inspection of the label would have revealed the statement, in very small type, " with the addition of a small quantity of fruit juice to improve the flavour."

This label has been before the public for years, and in effect it meant, for instance, Raspberry Jam contained more or less raspberries, together with fruit pulp in greater or less quantity, according to the quality of the jam and the honesty of the manufacturers.

During the past year the Food Manufacturers' Federation appointed a committee to discuss with members of the Society of Public Analysts the composition of jam, and as a result of their deliberations jam is now appearing in our shops labelled "Full Fruit Standard" and " Lower Fruit Standard."

It may be of interest to know what these so-called Standards represent:

## Fuli Fruit Standard.

In single fruit jam the amount of fruit is to vary from a maximum of 45 per cent. in the case of Rhubarb and Cherry, to a minimum of 30 per cent. for Black Currant, and they must be labelled as follows: "This Jam is guaranteed to conform
to the agreed Full Fruit Standard of the Federation of Food Manufacturers."

Lower Fruit Standard.
For second quality jam the minimum content of Fruit is 20 per cent., and there must be a notice on the label to the effect that the jam is mixed " with other fruit juice " in type of equal size. The receptacle must also bear the label as follows: "This Jam is guaranteed to conform to the Lower Fruit Standard of the Federation of Food Manufacturers."

Moreover, Citric, Malic, or Tartaric Acids and Artificial Colouring Matter may be added to either quality jam without declaration.

There is no disputing the fact that the old-fashioned home-made jam, which consisted of fruit and sugar only, has been almost entirely replaced by the manufactured variety. This being so, I venture to think that a black currant jam containing only 30 per cent. of Black Currants is a poor substitute for the old-fashioned variety, and to label it "Full Fruit Standard" is misleading to the public.

It should be clearly understood that these Standards have no legal significance, but they are intended to be a guarantee that, for instance, Black Currant jam of the Full Fruit standard actually contains 30 per cent. of black currants, whereas black currant jam, with the addition of a small quantity of other fruit juice to improve its flavour, was not only misleading, but untrue, as jam made from Black Currants would not be improved by the addition of extraneous fruit pulp.

## PRESERVATIVES AND COLOURING MATTER.

The Public Health (Preservatives, etc., in Food) Regulations now define the nature of the Foodstuffs or Beverage which may contain Preservatives and the maximum quantity of Preservatives allowed. Consequently the search for Preservative substances in Foods and Beverages forms a large and increasing proportion of the work of the Department.

Not only have the permitted Preservatives to be searched for and the quantity estimated to ascertain if the quantity present is within the limits allowed, but search has also to be made in those articles such as Cream, Milk, Butter, etc., to which it is now illegal to add Preservatives.

Similarly the use of Artificial Colouring matter is now controlled by these Regulations and such Foods and Beverages as are artificially coloured must be examined as to the nature of the Colouring Matter.

Two samples of Ground Ginger, purchased from the same vendor, were found to contain Sulphur Dioxide in excess of the limit laid down for this commodity. A warning was sent to the vendor, and the remaining stock was withdrawn from sale.

## DRUGS.

Forty-nine samples were analysed, all of which were purchased at local pharmacies, and proved to be in accordance with the standards laid down in the British Pharmacopoeia.

## SPIRITS.

Fifty samples of Whiskey were analysed, with the result that five of these were found to be diluted with water to a strength below the legal limit of 35 degrees under proof.

Nineteen samples of Gin proved to be of the correct strength.

The sale of water at the price of whiskey represents gross fraud on the consumer, and I am glad to be able to report an improvement during the year under review.

| Year |  |  | No. of Samples <br> Fxamined | No. of Samples <br> Adulterated | Percentage of <br> Adulteration |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1926 | $\ldots$ | $\ldots$ | $\ldots$ | 38 | 6 | 16 |
| 1927 | $\cdots$ | $\cdots$ | $\cdots$ | 68 | 14 | 20 |
| 1928 | $\cdots$ | $\cdots$ | $\cdots$ | 84 | 5 | 5.9 |
| 1929 | $\cdots$ | $\cdots$ | $\cdots$ | 51 | 13 | 25.4 |
| 1930 | . | $\cdots$ | $\cdots$ | 69 | 7.2 |  |

MISCELLANEOUS.
On two occasions Human Viscera were submitted by the Coroner for examination in cases of suspected poisoning. In one case Oxalic Acid was present, but in the other case no poison was detected.

Five cases, of which four consisted of the alleged administration of Drugs, were investigated for the City Police. The remaining case consisted of the examination of Chocolates which had been sent through the parcel post. The chocolates had been rather crudely tampered with, part of the inner portion having been removed and replaced by Oxalic Acid.

The remaining cases consist of samples submitted by the Medical Officer of Health, and samples brought to the Laboratory from time to time by ratepayers, or submitted by retailers in order to test the purity of their products.
